

Torque Sensors Force Sensors Multi-Component Sensors

Sensor Interfaces DIN Mounting Rail Devices Built-In Measuring Devices Portable Measuring Systems Tabletop and Laboratory Measuring Devices

Highly precise sensors for torque and force measurement which are applied in research, development, production, quality assurance and series production are our primarily contribution to the measurement technology.

We make high demands on the quality of our products. By the good contact to our customers, our products are subject to continuous enhancement; thereby we break new ground to meet our customers requirements.

Product Overview of Sensors

We offer rugged and reliable sensors in various versions and measurement ranges in accordance to the respective application requirement. Additionally, our product range includes a wide choice of accessories, such as couplings, measuring cables,

Built-In	N	leasuring	Dev	ices
-----------------	---	-----------	-----	------

	Туре	Technical Details
	GM 40	Amplifier for strain gauge sensors for DIN mounting rails, voltage output or voltage and current output
	GM 42-MAX	Minimum and maximum value memory device for DIN mounting rails, with 0 $\ldots\pm10$ V input universally applicable
an 4	GM 44-GW	The limit value evaluation with 2 adjustable limit values, 0 ± 10 V input, universally applicable
	CPJ/CPJ2S	Measuring amplifier for strain gauge sensors in 4- or 6-wire circuit for DIN moun- ting rails with voltage and current output, 4 parallel sensor connections, shunt cali- bration signal push button, low pass filter and 2 adjustable set points
	GM 62	Measuring amplifier for strain gauge sensors for DIN mounting rails with voltage output, 2 parallel sensor connections, external control, abatable clamps
	IPE 50 DIN	Digital weighing indicator with OIML-approval for DIN mounting rails, connection of up to 8 strain gauge sensors Output: RS485, RS232, PROFIBUS DP in option
	GM 41-NT	PSU (Power Supply Unit) for DIN mounting rail assembly with overload protection, output adjustable (23 28.5 V). The GM41-NT is an efficient, primary switched mode power supply unit for use in switch cabinets, clip fastening TH 35-rail assembly in slim design. By its wide range input it is world-wide applicable. The GM41-NT complies with the EN 60335-1 standard.

GM 80-PA	Measuring amplifier with passive sensors, with ad 10 sensor parameter set lable configuration and e
IPE 50 Panel	Digital weighing indicator sensors Output: RS485, RS232, I
ΡΑΧ	Programmable industry-o
PAX-DP	Programmable 2 channe
	GM 80-PA IPE 50 Panel PAX

Portable Measuring Systems

Туре	
GM 77	DC voltage measuring a 4½ digit LCD-display, ca
GM 80	Measuring amplifier with and passive sensors, US fast measurement of up configuration and evalua
AL 202	Measuring amplifier, late (passive sensors with m in the digital measureme dent

Technical Details

h data logger for up to 3000 measured values for active and adressable RS232 bus, 3 control inputs for external control, ets, fast measurement of up to 1000/s and with freely avaievaluation software GM80-VS2.

or with OIML-approval, connection of up to 8 strain gauge

, PROFIBUS DP in option

-digital built-in measuring devices

el industry built-in measuring devices

Technical Details

amplifier for strain gauge sensors, mains-independent, a alibration control switch and maximum value memory

th data logger for over 15000 measured values for active JSB interface, RS232 interface, 10 sensor parameter sets, up to 1000/s, mains-independent and with freely available lation software GM80-VS2

test generation V7 with data logger function for D7 sensors nV/V output signal and D7 plug), sensor specific parameters nent plug, fast measurements up to 1000/s, mains-indepen-

Test Benches

We provide customized system solutions and test benches such as torgue test benches, electric motor test rigs, force test stands, automotive test rigs and characteristics detection, from development to finished product, everything from one source.

Torque Test Benches

Electric Motor Test Rigs

Force Test Stands

Test Bench for Determination of the Torque Characteristics of Fixation Bearings:

- Measurement of the drag loss and the rotational speed
- Determination of the torque characteristics in response to the rotational speed

DC-Low-Voltage Motor Test Bench:

- Measurement of torque, number of revolutions, voltage and current
- determination of the mechanical and electrical performance and the efficiency

Test Bench for Measuring Tension and Compression Forces:

- Electromechanical drive via recirculating ball screw
- Maximum measuring force: 100 kN
- Maximum height of useable space: 500 mm
- Maximum useable space between the pillars: 260 mm
- Maximum traverse path: 250 mm

Automotive Test Rigs

Friction Torque Test Rig Testing Parameter:

- Torque
- Rotational Angle
- Temperature
- Speed

Do you have any questions about our test benches or products? Please write to us or give us a call. Our competent staff will be happy to help and answer your questions.

Calibrations

Lorenz Messtechnik GmbH is a manufacturer of force For our products we offer DAkkS and proprietary caand torque sensors, as well as a supplier of load cells and systems for sensor signal processing and has its own accredited calibration laboratory according to DIN EN ISO/IEC 17025.

librations. Proprietary calibrations are carried out with working standards which are subject to regular inspection equipment monitoring. Our calibration spectrum includes measured variables such as force, torque, rotation angle and voltage ratio.

Repairs

The service area is one of the essential components of our service offerings. For all our sensors and devices we offer a fast and cost-effective repair service (inspection, repair, maintenance ...). 000000000 000000000

DAkkS-Calibration Laboratory for Torque Sensors

The torque standard of our accredited calibration laboratory is used as the reference standard for our torque calibration devices which are inserted within production.

- Torque Measuring Range 1 N·m 200 N·m
- Uncertainty of Measurement 1.10⁻⁴

Strain Gauges (SG) Application

With the aid of a strain gauge, strains and stresses in your components tailored to your specific needs. material can be determined, which enable conclusions Thanks to our employees' many years of experience to be drawn about the stress of the component. in the field of SG application, we ensure the highest We conduct professional in-house SG applications on quality and a very long life of the measurement points.

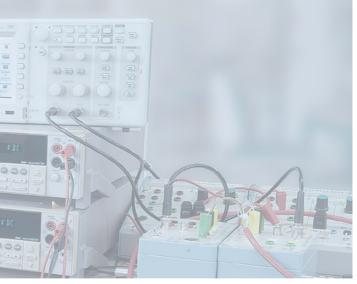

Examples:

Strain Gauge Application on Clamp

Strain Gauge Application on Oil Line

Lorenz sensors worldwide

Our quality management system ensures quality at the highest level:
